

Section 6.5 L'Hospitals Rule

Section 6.5 L'Hospital's Rule

When we were calculating limits, we saw methods for dealing with the following limits:

$$\begin{array}{ccc} \lim_{x \rightarrow 4} \frac{x^2 - 16}{x - 4} & & \lim_{x \rightarrow \infty} \frac{4x^2 - 5x}{1 - 3x^2} \\ \uparrow & & \uparrow \\ \text{substitution resulted in} & & \text{substitution resulted in} \\ \frac{0}{0} & & \frac{\infty}{\infty} \\ & & \text{indeterminate forms} \end{array}$$

L'Hospital's Rule → systematic way for the evaluation of indeterminate forms

$$\lim_{x \rightarrow a} \frac{f(x)}{g(x)} = \lim_{x \rightarrow a} \frac{f'(x)}{g'(x)} \quad \text{where } g'(x), f'(x) \text{ are differentiable and } g'(x) \neq 0$$

limit of a quotient of two functions = limit of their quotient of their derivatives

Evaluate $\lim_{x \rightarrow 0} \frac{\sin x}{x}$

→

Section 6.5 L'Hospitals Rule

Example: Evaluate $\lim_{x \rightarrow 1} \frac{x^8 - 1}{x^5 - 1}$

Example: Evaluate $\lim_{x \rightarrow 1} \frac{5x^4 - 4x^2 - 1}{10 - x - 9x^3}$

Example: Evaluate $\lim_{x \rightarrow 0} \frac{x^2}{1 - \cos x}$

→

Section 6.5 L'Hospitals Rule

Example: Evaluate $\lim_{x \rightarrow 0} \frac{\sec^2 x - 1}{3x^2}$

Example: Evaluate $\lim_{x \rightarrow 1} \frac{x^2 - x}{x^2 + 1}$

Other indeterminate Forms 0^0 1^∞ ∞^0 \longrightarrow use logarithms
